

How to prepare files for printing?

- **Final approval of visuals by the client must be done BEFORE sending files to Kalitec for printing. This is to avoid unnecessary revisions and any risk of printing obsolete files.**
- First inquire about any visible hardware or brackets that may affect the graphic design.
- Make sure to take them into account when preparing your files.
- Provide CMYK, high resolution files with texts converted to vectors.
- Pictures must be a **minimum of 150 dpi** and a **maximum of 300 dpi**.
- Graphics must be in metric scale (36 x 24 in will be manufactured at 900 x 600 mm).
- Only one (1) sign per file.
- Add a 3 mm bleed and crop marks.
- For a custom shaped sign, include a file with the shape alone and holes (if any).
- Specify any critical colour requirements and provide matching Pantone Solid Coated codes. Extra fees may apply.
- It is highly recommended to order one (or multiple) mini proofs to ensure that all colours match as expected, and that every aspect of the design is well positioned. The size of the proof is 375 x 285 mm and we can print the whole sign or parts of it.
- Note that every printer and computer screen have different settings. This is why it cannot be assumed that what is printed will be exactly as what is seen on a particular screen. Proofs avoid such issues.

How to transfer files ?

We recommend using WeTransfer (www.wetransfer.com) which is free, easy to use and requires no account. Send your files to info@kalitec.com

We are looking forward to produce your creations!
